TITLE: Synthesis of alkylaminoalkylamides of substituted
2-aminopyrroles as potential local anesthetic and
antiarrhythmic agents. I: α -amines

I

II

AB The synthesis, local anesthetic and antiarrhythmic properties, and central nervous system toxicity of 19 2-(2-alkylaminoalkylamido)pyrroles, e.g. I and II, are described. The pyrroles were prepared by alkylation of 2-aminopyrroles with haloacyl halides followed by reactions with amines. Most of the compds. exhibited local anesthetic activity by the guinea pig wheat test, and four showed activity comparable to or greater than that of lidocaine. Most compds. also exhibited antiarrhythmic activity; five compds. had activity comparable to that of lidocaine, and one was more potent. All compds. exhibiting antiarrhythmic activity also were toxic to the central nervous system.
